Upon termination of Terms and Conditions: (a) all of Buyer's rights under Terms and Conditions immediately terminate; (b) Buyer is not entitled to a refund of any amount paid; and (c) all other articles of Terms and Conditions will continue to apply in accordance with their terms.
25. The failure by Company to exercise or enforce any right or provision of Terms and Conditions will not constitute a present or future waiver of such right or provision nor limit Company's right to enforce such right or provision at a later time. All waivers by Company must be unequivocal and in writing to be effective.
26. Buyer agrees and acknowledges that all agreements, notices, disclosures and other communications that Company provides Buyer pursuant to Terms and Conditions or in connection with or related to Buyer's purchase of Tokens, including Terms and Conditions, may be provided by Company, in its sole discretion, to Buyer, in electronic form.

Exhibit A: Risk Factors

- 1. Legal risks regarding securities regulations** There is a risk that in some jurisdictions Tokens might be considered to be a security, or that it might be considered to be a security in the future. Company does not give warranties or guarantees that Tokens are not a security in all jurisdictions. Each Buyer of Tokens shall bear its own legal or financial consequences of Tokens being considered a security in their respective jurisdiction. Every Buyer is bound to check if acquisition and disposal of Tokens is legal in its jurisdiction, and by accepting Terms and Conditions, each Buyer undertakes not to use Tokens should their use not be legal in the relevant jurisdiction.

Acquiring cryptographic tokens in possession and exchanging them for other cryptographic tokens will most likely continue to be scrutinized by various regulatory bodies around the world, which has so far given mixed reactions and regulatory impact. The legal ability of Company to provide Tokens in some jurisdictions may be eliminated by future regulation or legal actions. In the event, it turns out with a high degree certainty that Tokens are not legal in certain jurisdiction, Company will either a) cease operations in that jurisdiction, or b) adjust Tokens in a way to comply with the regulation should that be possible and viable.

- 2. Risks associated with the Ethereum protocol** Tokens are based on the Ethereum protocol. As such, any malfunction, unintended function or unexpected functioning of the Ethereum protocol may cause the Tokens to malfunction or function in an unexpected or unintended manner. Ether, the native unit of account of the Ethereum Protocol may itself lose value in ways similar to Tokens, and also other ways. More information about the Ethereum protocol is available at <http://www.ethereum.org>
- 3. Risk of unfavourable regulatory action in one or more jurisdiction** Blockchain technologies have been the subject of scrutiny by various regulatory bodies around the world. The functioning of the Ethereum network and associated blockchain networks and Tokens could be impacted by one or more regulatory inquiries or actions, including but not limited to restrictions on the use or possession of digital tokens like Tokens, which could impede or limit their existence, permissibility of their use and possession, and their value.

4. **Risk of theft and hacking** Hackers or other groups or organizations may attempt to interfere with the third-party wallet of Buyer, Website or the availability of Tokens in any number of ways, including without limitation denial of service attacks, Sybil attacks, spoofing, smurfing, malware attacks, or consensus-based attacks.

5. **Risk of security weaknesses in Website and Tokens source code or any associated software and/or infrastructure** There is a risk that Website and Tokens may unintentionally include weaknesses or bugs in the source code interfering with the use of or causing the loss of Tokens.

6. **Risk of weaknesses or exploitable breakthroughs in the field of cryptography** Advances in cryptography, or technical advances such as the development of quantum computers, could present risks to cryptocurrencies, Ethereum Platform, Tokens, which could result in the theft or loss of Tokens.

7. **Risk of mining attacks** As with other decentralized cryptocurrencies, the Ethereum Blockchain, which is used for Tokens, is susceptible to mining attacks, including but not limited to double-spend attacks, majority mining power attacks, “*selfish-mining*” attacks, and race condition attacks. Any successful attacks present a risk to Tokens, expected proper execution and sequencing of Tokens, and expected proper execution and sequencing of Ethereum contract computations in general. Despite the efforts of Company and Ethereum Foundation, the risk of known or novel mining attacks exists. Mining Attacks, as described above, may also target other blockchain networks, with which Tokens interact with and consequently Tokens may be impacted also in that way to the extent, described above.

8. **Risk of low or no liquidity** Even though there are currently online services available, which enable possibility of exchange of cryptographic tokens between themselves, and also, some of them enable exchange of cryptographic tokens for fiat money, there are no warranties and/or guarantees given that Tokens will be listed or made available for exchange for other cryptographic

tokens and/or fiat money, and no guarantees are given whatsoever with the capacity (volume) of such potential exchange. It shall be explicitly cautioned, that such exchange, if any, might be subject to poorly-understood regulatory oversight, and Company does not give any warranties in regard to any exchange services providers. Buyers might be exposed to fraud and failure. In any case, Company will not enable exchange Tokens for fiat currency. Buyer may not at any given time be able to acquire or dispose of its Tokens due to lack of liquidity.

9. **Risk of loss of value** Value of Tokens may fluctuate and their Buyers might suffer loss in value of such acquired tokens. There might be different reasons that would cause unfavourable fluctuations of the value of Tokens. There is a risk that Buyer may suffer a complete loss.

10. **Risk of uninsured losses** Tokens are unlike bank accounts or accounts at some other financial institutions entirely uninsured.

11. **Risk of malfunction in the Ethereum network or any other Blockchain** It is possible that the Ethereum network or any other network, to which Tokens are interacting with, malfunctions in an unfavourable way, including but not limited to one that results in the loss of Tokens.

12. **Internet transmission risks** Buyer acknowledges that there are risks associated with using Tokens including, but not limited to, the failure of hardware, software, and Internet connections. Buyer acknowledges that Company shall not be responsible for any communication failures, disruptions, errors, distortions or delays Buyer may experience when using Website and Tokens, howsoever caused.

13. **Unanticipated risks** Cryptocurrencies and blockchain are new and untested technology. In addition to the risks set forth here, there are risks that Company cannot foresee and it is unreasonable to believe that such risks could have been foreseeable. Risks may further materialize as unanticipated.

14. Insufficient interest in Company and Tokens It is possible that Company or Tokens will not be used by a large number of individuals, businesses and other organisations and that there will be limited public interest in the creation and development of its functionalities. Such a lack of interest could impact the development of Company. Company will contract with developers to help build Company's products, and is working with third-party developers around the world to create an interest in Company. However, Company cannot predict the success of these development efforts or the efforts of other third parties.

15. Tokens, as developed, may not meet Buyer's expectations Platform and Service are currently under development and may undergo significant changes before release. Buyer's expectations regarding the form and functionality of Tokens may not be met upon release of new Website, Service, additional products and services for any number of reasons, including a change in the design and implementation plans and execution of the implementation of Tokens.

16. Platform may never be completed or released Platform described may never be released and operational, even though Company will make reasonable efforts to complete such platform and Service.

17. Total Loss Buyers should understand that Tokens may have no value and Buyer may lose all amounts paid.

18. Risk of loss of key A private key, or a combination of private keys, is necessary to control and dispose of Token stored in your ewallet or vault. Accordingly, loss of requisite private key(s) associated with Buyer's digital wallet or vault storing Token will result in loss of such Token. Moreover, any third party that gains access to such private key(s), including by gaining access to login credentials of a ewallet or vault service Buyer's use, may be able to misappropriate Buyer's Tokens. Any errors or malfunctions caused by or otherwise related to the ewallet or vault Buyer chooses to receive and store Tokens, including Buyer's own failure to properly maintain or use such digital wallet or vault, may also result in the loss of Tokens.

19. **Risk of Tax imposed** The tax characterization of Token is uncertain. Buyer must seek his or her own tax advice in connection with purchasing Token, which may result in adverse tax consequences to Buyer, including withholding taxes, income taxes and tax reporting requirements.
